Education

Indian Institute of Technology Bhilai

Bachelors in Technology in Data Science & Artificial Intelligence | GPA: 8.87 / 10

May 2025

India

Coursework: Machine Learning, Deep Learning for Computer Vision, NLP, Artificial Intelligence, Statistical Programming, DBMS, Cloud Computing, Computer Networks, Information Security

Experience

GlobalLogic | Software Engineer

August 2025 – Present

Client: Google | LLM Integration, AI Agents, Angular, TypeScript, REST APIs, Agile

Gurugram, India

- Engineered **AI Contract Agent** for internal Google platform with **realtime conversational UI**, **LLM streaming integration**, **async response handling**, and **context management** reduced contract retrieval from hours to **8 seconds**, boosting productivity by **99%**
- Built end-to-end **AI agent features**: **LLM backend orchestration** service, **human feedback mechanism** (Strong/Incorrect ratings, text feedback) via **RateInteraction RPC**, enabling **RLHF-style feedback loops** at scale across internal contract intelligence platform
- Solved **cross-project encrypted filter propagation** bug previously unresolvable by full-time engineers and AI agents by independently **reverse-engineering undocumented encryption/decryption logic** across two codebases, delivering seamless **filter continuity**
- Implemented **production-grade UI components** directly from screenshot mockups with no existing reference, integrating live **gRPC backend services** across two concurrent projects, bridging **AI-generated design intent** with fully tested frontend delivery
- Contributed to **prompt-result pipelines**, **real-time streaming response architecture**, and **AI feedback loop infrastructure**, collaborating with backend and AI teams in **Agile** environment to ship production-ready AI features to thousands of Google employees

Semusi Technologies | ML Intern

May 2024 – July 2024

Python, PySpark, Apache Spark, Kafka, Scikit-Learn, PostgreSQL, Oracle, MinIO

Remote

- Engineered **PySpark-based ML clustering pipeline** for lookalike audience modelling, applying **unsupervised learning** (K-Means) on large-scale marketing datasets to deliver targeted prospect lists, projected to **boost lead conversion by 25%** for bank loan campaigns
- Architected **scalable data ingestion pipeline** using **Apache Spark** across **5+ heterogeneous platforms** (Oracle, PostgreSQL, SFTP, Google Ads, MinIO), eliminating **95% manual overhead** while improving processing throughput by **40%** to feed ML training workflows
- Built **real-time data streaming workflows** using **Apache Kafka** (producers, consumers, topics, partitions) and **Apache Pulsar**, enabling continuous **low-latency data delivery** to ML model serving and training infrastructure across distributed pipeline stages

Projects

LangChain Multi-Tool Agents | Python, LangChain, Gemini API, RAG, FastAPI, Docker | [GitHub](#)

- Built **8+ production Generative AI applications** using LangChain, RAG pipelines, Gemini API, and multi-tool agent architectures; implemented memory management, tool chaining, and prompt engineering patterns with containerised **Docker** deployment via automated CI/CD pipelines

AI Interview Practice System | Python, Computer Vision, NLP, Speech Processing, REST APIs | [GitHub](#)

- Designed a **multi-modal AI system** performing real-time video and audio analysis using **Computer Vision and NLP** models to evaluate verbal communication, body language, and pronunciation - delivering structured, personalised feedback to improve candidate employability outcomes at scale

SwiftBERT - Knowledge Distillation | Python, PyTorch, Transformers, NLP | [GitHub](#)

- Implemented a **knowledge distillation framework** compressing BERT into a student model **86.89% smaller** and **94.87% faster** while retaining **95% accuracy**, demonstrating deep understanding of transformer architectures, model optimisation, and efficient NLP inference techniques

HB Meter | Python, OpenCV, Signal Processing, Raspberry Pi | **Deployed & in active use at AIIMS Raipur**

- Developed an **end-to-end ML inference system** on Raspberry Pi 4 that processes 30-second finger video recordings through a signal processing and prediction pipeline, achieving **97% haemoglobin prediction accuracy** - **actively deployed at AIIMS Raipur** as a clinical diagnostic tool

Technical Skills

AI & ML: LangChain, AI Agents, RAG, Prompt Engineering, Generative AI, Transformers, PyTorch, Scikit-Learn, MLFlow, DVC

NLP & Vision: BERT, Knowledge Distillation, Text Classification, Named Entity Recognition, Computer Vision, OpenCV

Languages: Python, Java, JavaScript, TypeScript, SQL, R, C++, HTML, CSS

Backend & APIs: FastAPI, Spring Boot, RESTful APIs, Microservices, OOP, Design Patterns, Docker, CI/CD

Data & Streaming: Apache Spark, PySpark, Kafka, Apache Pulsar, ETL Pipelines, PostgreSQL, MongoDB, Oracle

Cloud & DevOps: AWS (S3, Lambda, EC2), Docker, Git, Linux, CI/CD Pipelines, Agile/Scrum

Frontend: Angular, ReactJS, TypeScript, LLM Streaming UI, Real-Time Web Applications
